

UBIFLEX FINIO

Watertightness was never so easy.

Wherever a watertight roof connection is required - at dormers, skylights, chimneys, solar panels, etc. - Ubiflex Finio can be used anywhere. This is because the butyl strips on the top and bottom sides have a particularly high adhesive strength and create a watertight seal on any substrate. Thus Ubiflex Finio proves its value both in combination with stone, metal and ceramic substrates. In case of (overlapping) application, vulcanization also occurs due to the fully self-adhesive backing which makes it perfectly waterproof. Processing is also not weather-dependent. The waterproof connection can be made on damp substrates and at low temperatures (down to 5°C).

Features & benefits

- Lightweight
- Easy and quick installation
- Adhesion to most materials
- Double adhesion for high-performance and durability
- Can be stretched in both directions
- Vulcanises
- Environmentally friendly; non-toxic and recyclable
- Available in 3 colours

UBIFLEX FINIO

Watertightness was never so easy.

Ubiflex Finio features a full adhesive backside protected with a two-part removable film for convenient handling during application. Additionally the rolls are equipped with two butyl adhesive strips to ensure perfect adhesion to the surfaces in many building applications.

Ubiflex Finio can easily be formed by hand and as required be finished with a roller in order to ensure optimal sealing.

Ubiflex Finio rolls are available in different colours, width and length. They are delivered in a protective box.

 Ubiflex Finio can be applied for any new build and renovation projects.
